

ABSTRACT

A device cover (21) is formed as a whole in a bent L-shape by an upper face (21A) covering a device accommodation space (11) from an upper side, a side face (21B) covering the 5 device accommodation space (11) from a right side, and a convex curved bent face (21C) connecting the upper face (21A) and the side face (21B). In addition, the device cover (21) is separated into an upper face separate cover element (22) and a side face separate cover element (25) at a joint position (28) 10 extending in a direction from the front toward the rear and then, these separate cover elements (22) and (25) are integrally connected by the use of a connecting plate (29).
